Open space mapping study was commissioned by UNDP Nepal's Accelerator Labs. The objective of the mapping was to find out available open space in Kathmandu Metropolitan City, Lalitpur Metropolitan City, Kirtipur Municipality and Bhaktapur Municipality including availability of basic amenities/faculties.

Open space is defined as a piece of land that is in use or abandoned and owned by Government of Nepal.

To collect the open space data, a set of questionnaires was developed. The approved questionnaire was uploaded in the data collection application called Open Foris Collect. Enumerators were trained on the data collection process and questionnaire. Based on that enumerators collected and reported the data on daily basis. The GIS data accuracy of the data is 5m, and the spatial reference is CGS WGS 1984 (Central Nepal).

Collected data were cleaned and analysis using ArcGIS. Open Street Map was used to locate the open space. Final analyzed data was visualized used the software Adobe Illustrator, and was compiled using Adobe InDesign software.

There are some limitations and challenges in the mapping. In some wards Local Government Officials were reluctant to share the list of open space located in their area. Enumerators relied on local resident to collect the data.
