1- **Government Response**

The first case of COVID-19 in Honduras was officially confirmed on March 11th, so a travel ban was in place, restricting all national and international flights as well as ground transportation.

On March 13th, the order was issued to close schools, meetings of more than 50 people were banned. As of March 16th, a mandatory curfew was established as of today.

As of June 22nd, the country has reported 12,306\(^1\) confirmed and 358\(^2\) deaths.

The Government has established a plan to reduce the negative impact of the pandemic on the Honduran population. A council of economic advisers has proposed several measures to cushion the negative impact on aggregate macroeconomic performance, ensure basic needs by providing food to the most vulnerable families, and reduce corporate tax burdens to prevent mass layoffs for the duration of the pandemic.

As a way of shoveling the food problems of the most depressed population in quarantine, the Government of Honduras established the Honduras Solidarity Program, in order to provide basic food to some 800,000 families nationwide.

Also, the self-employment workers support program was created on April 22nd, aimed at providing a contribution in kind (medicines, food and biosafety supplies). This program is in the process of being implemented.

By the beginning of April, two bonds were approved to support the agribusiness productive sector: "productive solidarity "and" coffee grower ". To date, more than 77,000 small producers have received support.

To support the transportation sector, as part of the Honduras Solidarity Program in coordination with the National Service for Entrepreneurship and Small Businesses (SENPRENDE), the Armed Forces, and the Honduran Institute of Land Transportation (IHTT), more than 80,000 solidarity bags for members of various associations of taxi drivers and public transport drivers affected by the restriction measures.

According to the Country Office analysis, around 80% of the employed population in the country are self-employed or work in small or medium-sized enterprises (SMEs), contributing with around 15% of the private sector’s GDP but around 70% of the employed population lack any type of social support or employment benefits.

During the second week of May, the start of a pilot process for companies to reopen on a phased approach was authorized, companies are supposed to carry their work activities under biosafety protocols, endorsed by the Secretary of Labor and Social Security.

Starting in June, Honduras has begun a process of gradual opening of the productive and economic sector that was restricted during the pandemic, at the same time maintaining the population’s circulation restrictions.

The public health system continues to operate with deprivations, while the positive cases of COVID-19 continue to increase, which means an additional challenge for the country conducting an economic opening amid a limited availability of spaces for emergency care.

2- **UNDP Support to Prepare, Respond and Recover**

**Strengthening Health Systems**

- Support for the continuity of Human National Commissioner (CONADEH) services on Solidarity Welfare Municipalities Programme. Conflict prevention project.

---
